A;Note: the authors translated the codon GAA for residue 1460 as GIn, and GAG for C;Comment: Prolines and lysines at the third position of the tripeptide repeating are 5-hydroxylated and subsequently O-glycosylated.
C;Comment: The amino-terminal propeptide domain appears not to be completely cleav
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              F;109-186/Region: helical F;187-208/Region: nonhelical F;209-1225/Region: helical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         C;Comment: The amin

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

US-10-021-121-4
Sequence 4, Application US/10021121
Patent No. US20020142444A1
GENERAL INFORMATION:
APPLICANT: CATAS, Ingrid W
TITLE OF INVENTION: A2-1 Neurotrophic Factor
NUMBER OF SEQUENCES: 10
CORRESSEE: Genentech, Inc.
STREET: 1 DNA Way
CITY: South San Francisco
STATE: Callitornia
COUNTRY: USA
ZIP: 94080
COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5 inch, 1.44 Mb floppy disk
COMPUTER READABLE FORM:
MEDIUM TYPE: 3.5 inch, 1.44 Mb floppy disk
COMPUTER SEADABLE FORM:
MEDIUM TYPE: 3.5 inch, 1.44 Mb floppy disk
COMPUTER SEADABLE FORM:
MEDIUM TYPE: 3.5 inch, 1.44 Mb floppy disk
COMPUTER IN PC COMPATIBLE
OPERATING SYSTEM, PC-DOS/MS-DOS
SOFTWARE: WinPatin (Genentech)
FILING DATE: 106-Dec-2001
CLASSIFICATION NUMBER: US/08/635,130
FILING DATE: 19-MAX-1996
ATTORNEY/AGENT INFORMATION:
NAME: TOTCHAA, PhD., Timothy E.
REGISTRATION NUMBER: 15,700
REFERENCE/DOCKET NUMBER: 56,700
REFERENCE/DOCKET NUMBER: 56,700
REFERENCE/DOCKET NUMBER: 56,700
REFERENCE/DOCKET NUMBER: TOTCHAA, PhD., Timothy E.
REGISTRATION INFORMATION:
TELEFAX: 650/952-98674
TELEFAX: 650/952-98674
TELEFAX: 650/952-98674
INFORMATION TORNATION:
LENGTH: 340 amino acids
```

```
APPLICANT: Moliand, Sacha
APPLICANT: Mosmalu, Geraldine
APPLICANT: Mosmalu, Geraldine
APPLICANT: Mosmalu, Geraldine
TITLE OF INVENTION: OLIGOMERIZED RECEPTORS WHICH AFFECT PATHWAYS REGULATED
TITLE OF INVENTION: BY TRANSMEMBRANE LIGANDS FOR ELK-RELATED RECEPTOR
TITLE OF INVENTION: TYROSINE KINASES
FILE REFERENCE: 11757.23USWO
CURRENT APPLICATION NUMBER: US/10/138,787
CURRENT APPLICATION NUMBER: US/99/214,631
PRIOR FILING DATE: 1997-07-04
PRIOR APPLICATION NUMBER: 60/021,272
PRIOR FILING DATE: 1997-07-05
INUMBER OF SEQ ID NOS: 13
